Your quickest way to the highest yields.

The transformerless three-phase inverters blueplanet 5.0 TL3 to 9.0 TL3.

All of the advantages of the larger 3-phase inverters can now be found in one power class which is just perfect for private roof systems. The blueplanet 5.0 TL3 to the 9.0 TL3 come, without exception, with 2 MPP trackers which can get to grips with all imaginable design configurations of a modular PV generator. As such, each MPP tracker can process the whole AC output. If you also consider the extremely wide input voltage range from 200 V to 800 V, multiple string configurations become possible. So, with these characteristics, the blueplanet TL3 present themselves as the most flexible three-phase inverters in their power class on the market.

The DC and AC periphery of the blueplanet TL3 ensures the quickest cabling thanks to plug-in connectors and the menu selection is performed conveniently using the graphic display. So that the appliances can stand up to the harshest conditions out in the open, their compact housing is built to IP65 protection class. Nevertheless, weighing just 30 kg they can still be carried easily.

Should the RS485, Ethernet and USB port interfaces still leave something to be desired, optional connections for SO-connected appliances as well as 4 digital inputs and outputs are available. The data logger and the webserver are already in-

tegrated as standard! As a result, these inverters offer complete monitoring and strong communication in any environment.

And, if you want to use your self-generated solar power in your own home, the blueplanet 5.0 TL3 to 9.0 TL3 also come with our Privatt function for managing self-use.

Available in Q2/2015.
